

Age Lab

1. Open eclipse, create a new java project and a new class named MyAge.java
2. In your main method, use System.out.println to calculate and print the age of everyone in your family. Example:

```
System.out.println ("James");
```

```
System.out.println (2016 - 1977);
```

3. Click the green arrow to run the program
